

How Does Autodesk Design Review Streamline Infrastructure Projects?

Autodesk® Design Review software streamlines design review processes with custom markup and approval tools that help ensure everyone has the most up-to-date drawings, maps or models. Now team members in the office or out in the field can accurately review 2D and 3D designs digitally, offer feedback quickly and easily, and track and round-trip their changes while cutting significant time off the review cycle.

Autodesk Design Review allows you to leverage existing technology investments in Autodesk design software and third-party systems such as geospatial data storage, work management, or ERP to automate processes.

1 Drafting & Design

Speed processes utilizing Autodesk Design Review to digitally share and review geospatial data within your organization or with external consultants. Review and integrate changes digitally in Autodesk Map®, Autodesk Civil 3D®, AutoCAD® software, streamlining revisions.

2 Construction

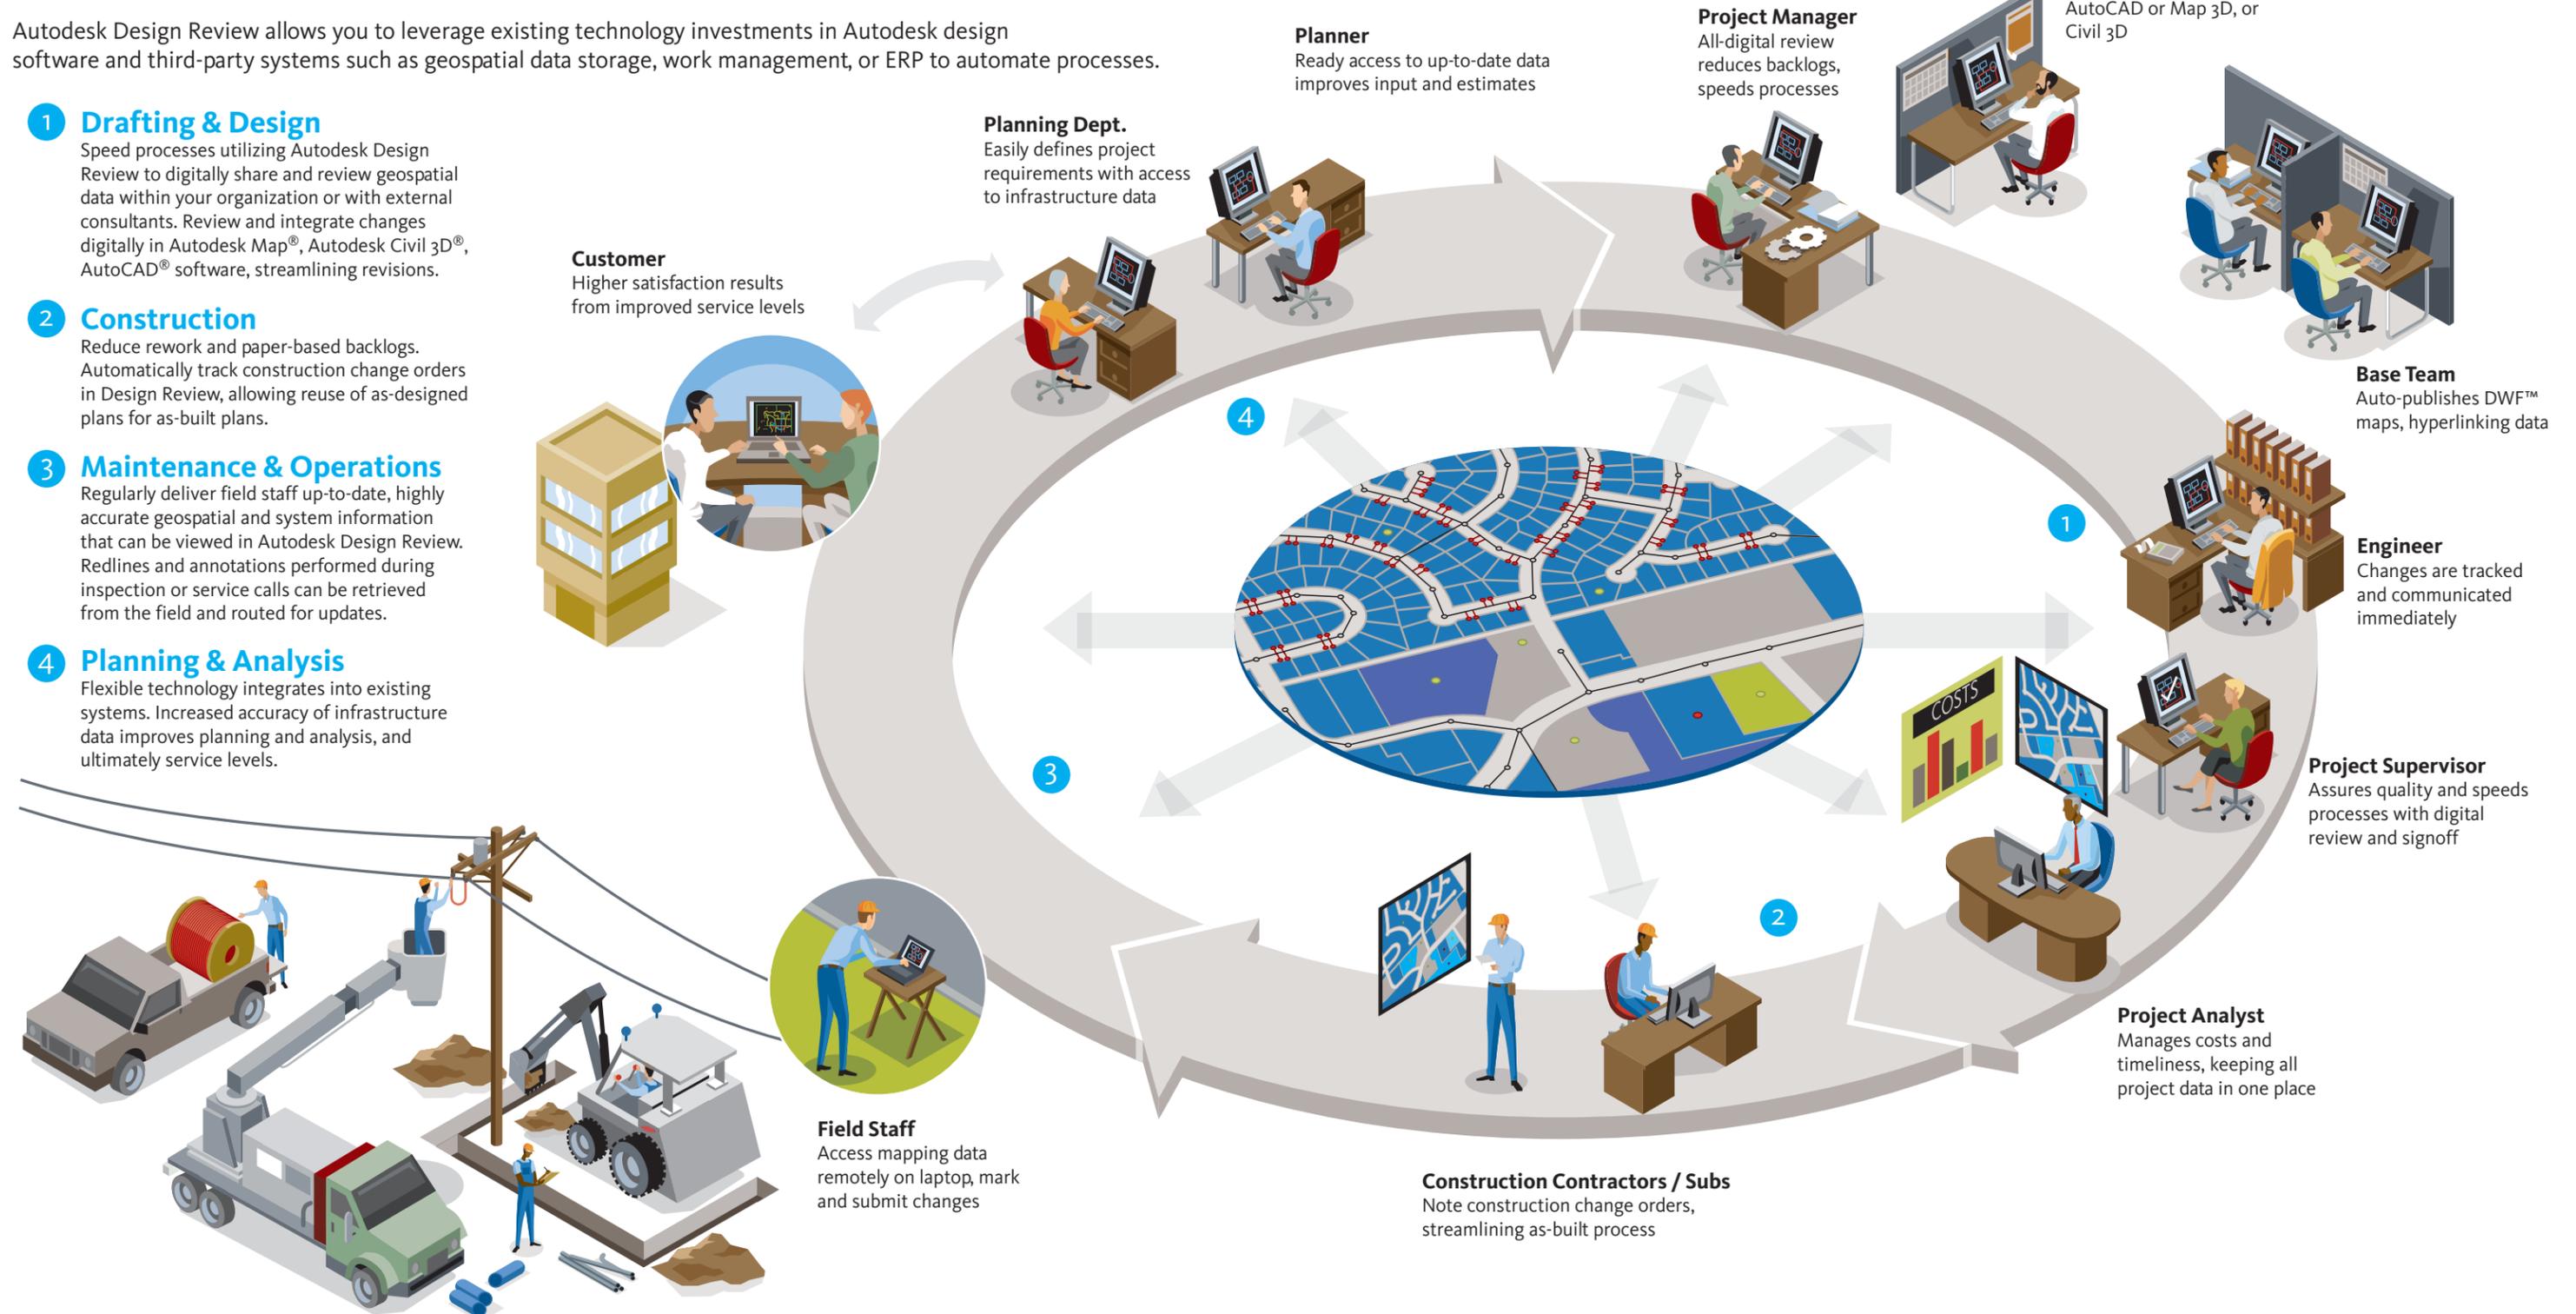

Reduce rework and paper-based backlogs. Automatically track construction change orders in Design Review, allowing reuse of as-designed plans for as-built plans.

3 Maintenance & Operations

Regularly deliver field staff up-to-date, highly accurate geospatial and system information that can be viewed in Autodesk Design Review. Redlines and annotations performed during inspection or service calls can be retrieved from the field and routed for updates.

4 Planning & Analysis

Flexible technology integrates into existing systems. Increased accuracy of infrastructure data improves planning and analysis, and ultimately service levels.
